## Covid-19 is Real

You cannot hide deaths. Perhaps in restrictive countries like China, but surely not on a global scale. That is why I believe that COVID-19 is real. I think there is a foul virus that has tainted the air this past months and that this novel virus is the cause of some empty chairs in many living rooms. This can be readily affirmed by examining the statistics for excess deaths. The following is snapshot of that kind of data although it is only for some four countries.

### Excess mortality during COVID-19: Deaths from all causes compared to previous years, all ages

Our World  
in Data

Shown is how the number of weekly deaths in 2020–2021 differs as a percentage from the average number of deaths in the same week over the years 2015–2019. This metric is called the P-score. We do not show data from the most recent weeks because it is incomplete due to delays in death reporting.

While this does not provide a complete global picture, you can see that there was some alarming increase in death rates especially between March and April 2020 compared to previous years.

Regardless, you can see that in some countries, there was no excess deaths at all for some
