First, there was silence. She lived in a silent empty world. And she felt lonely. Then she met the initial impulse and they became friends.

They fell in love and wanted to create something beautiful to make life happier. They decided to create a world of harmony of sound and silence, where everything will be harmoniously distributed.

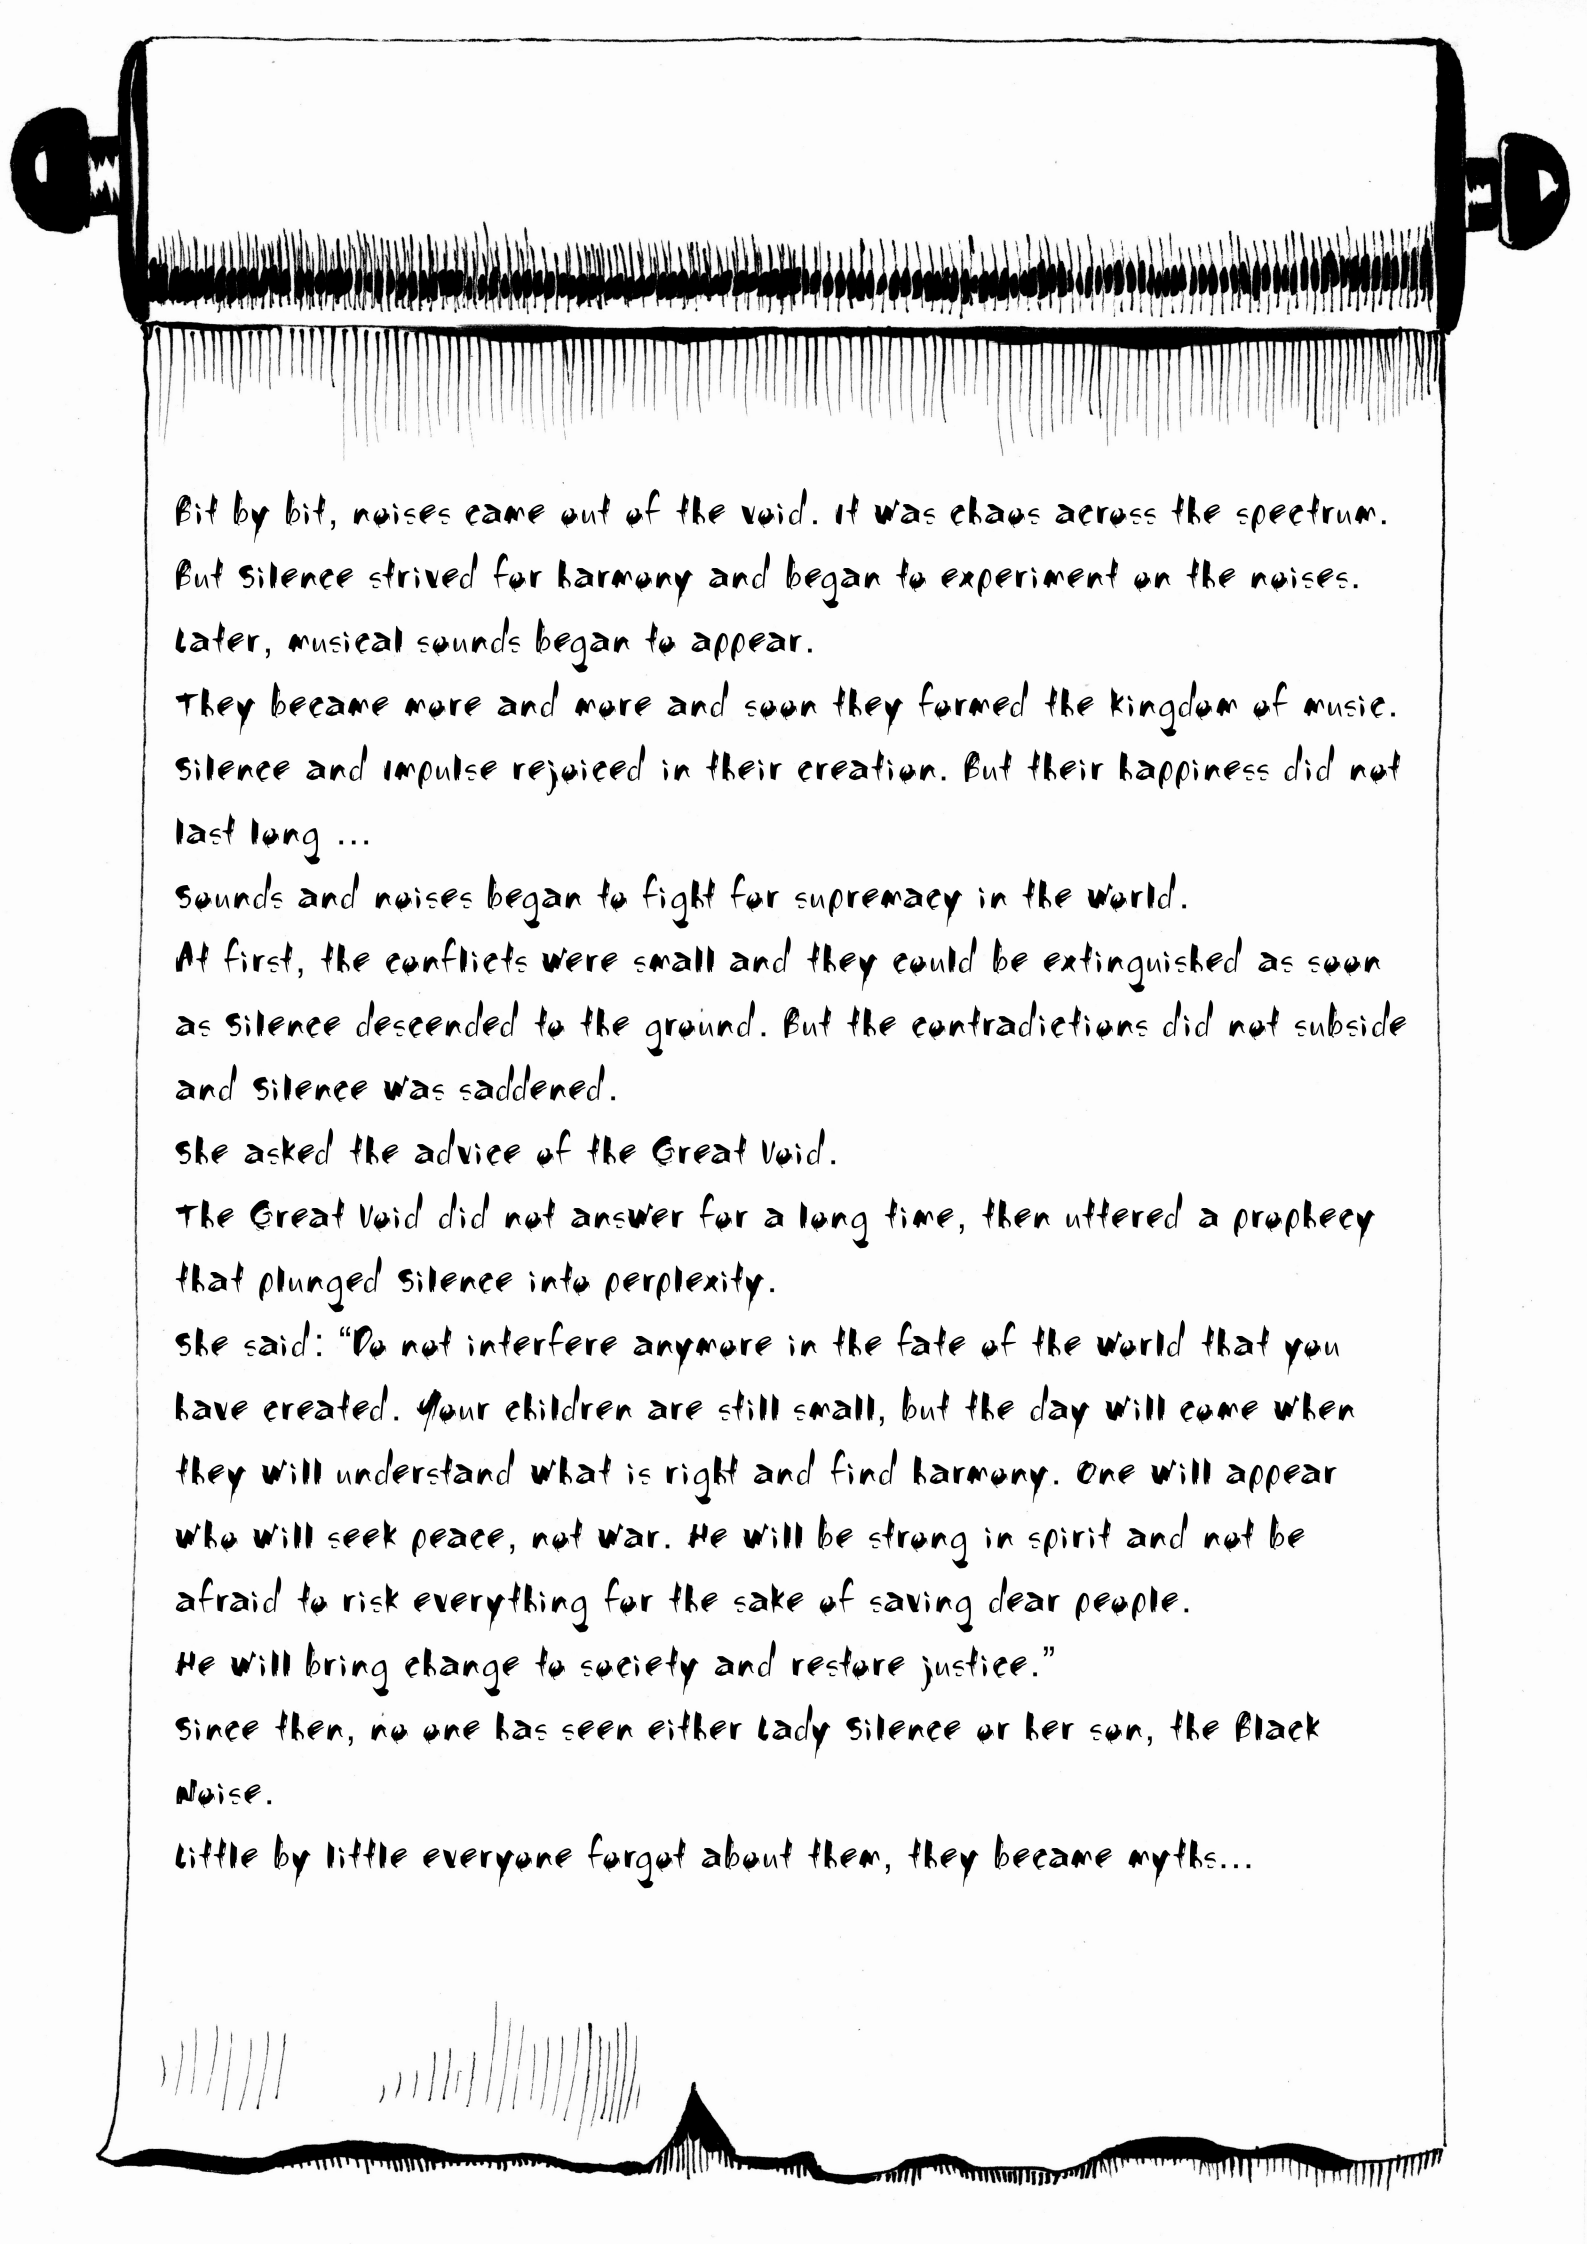

They turned to the Great Void and asked permission to create a new world.

so the Black Noise was born - their first creation. He looked like his mother: silent, with jet-black hair and an expressive gaze that made everyone hold their breath.

only a few things he was like his father. His intention was unshakable. if he decides something, he cannot be persuaded.

Bit by bit, noises came out of the void. It was chaos across the spectrum. But silence strived for harmony and began to experiment on the noises. Later, musical sounds began to appear.

They became more and more and soon they formed the kingdom of music. Silence and impulse rejoiced in their creation. But their happiness did not last long ...

Sounds and noises began to fight for supremacy in the world.

At first, the conflicts were small and they could be extinguished as soon as silence descended to the ground. But the contradictions did not subside and silence was saddened.

She asked the advice of the Great Void.

The Great Void did not answer for a long time, then uttered a prophecy that plunged silence into perplexity.

She said: "Do not interfere anymore in the fate of the world that you have created. Your children are still small, but the day will come when they will understand what is right and find harmony. One will appear who will seek peace, not war. He will be strong in spirit and not be afraid to risk everything for the sake of saving dear people.

He will bring change to society and restore justice."

Since then, no one has seen either Lady Silence or her son, the Black Noise.

Little by little everyone forgot about them, they became myths...

For many years there was a war, but then King Polyphon concluded a peace treaty with the Village of Noises. Since then, the Kingdom of Music has been surrounded by a high insulating wall, and both kingdoms let out a sigh of relief. Noises did not interfere with the music, and the music did not interfere with Noises.

But nevertheless, the hidden tension continued to grow ...

Today the Village of Noises is really noisy. And my job is to maintain the balance and insulation of the wall.

Hey!

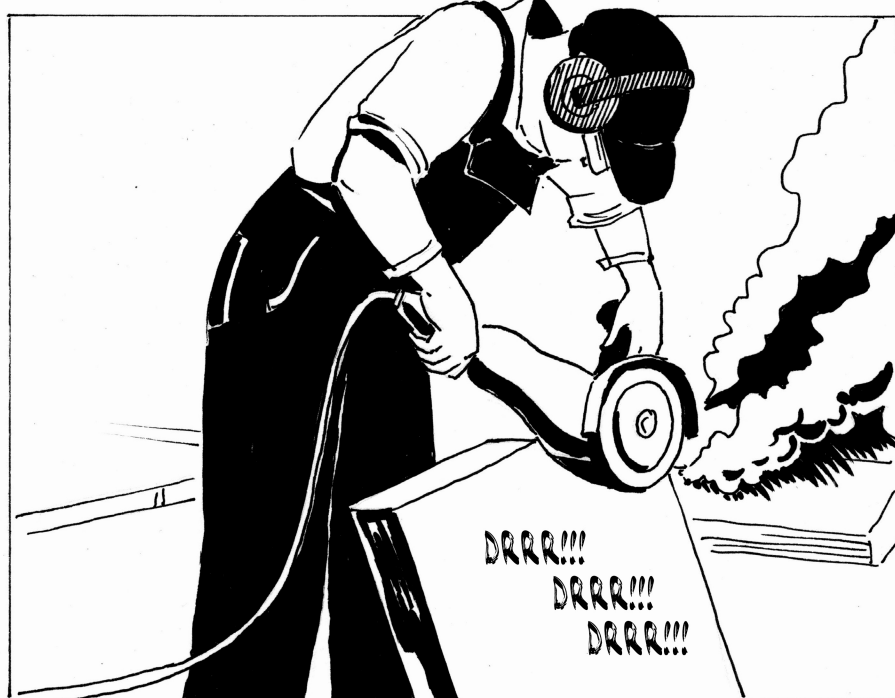

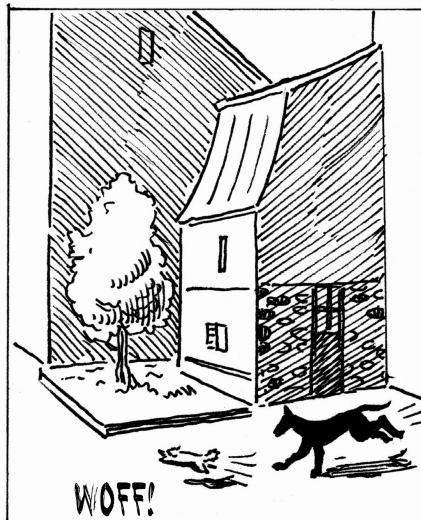

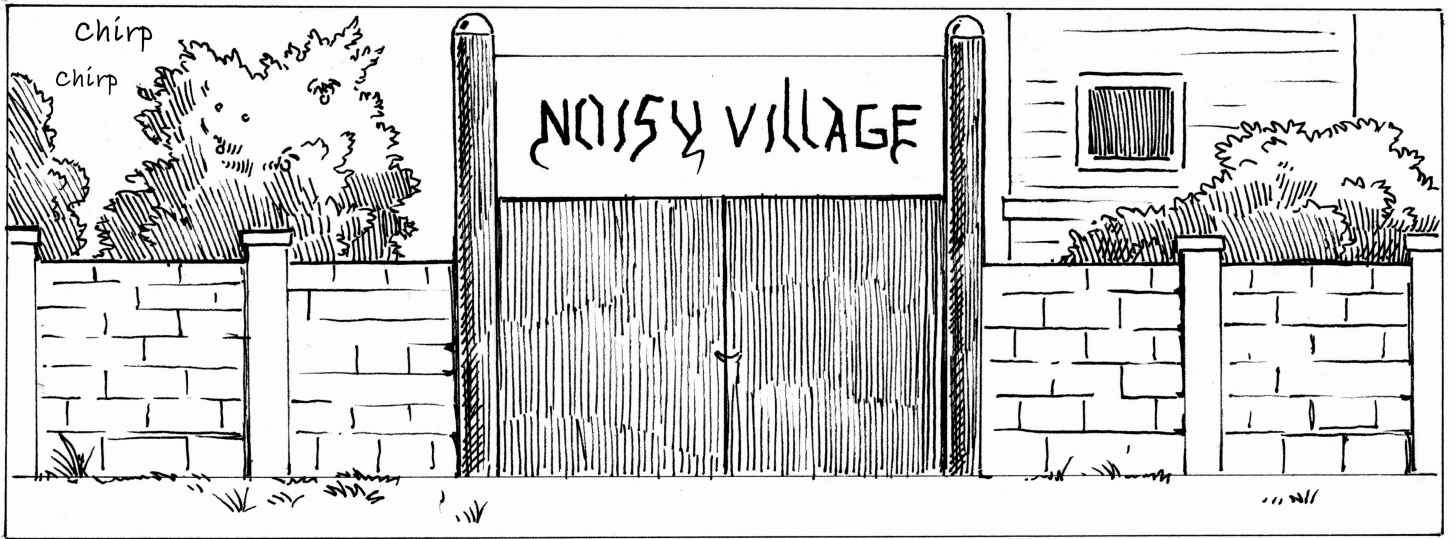

My name is White and I am from the White Noises clan. Today is the final graduation exam, where I will show what I learned at school, and then I will be officially employed at my job.

Rose - a member of the Pink Noise clan.
Pink noise is the noise of natural phenomena such as rain, wind, and the sea's sound. Its Spectral Power decreases steadily from low to high frequencies. It is an excellent sedative.

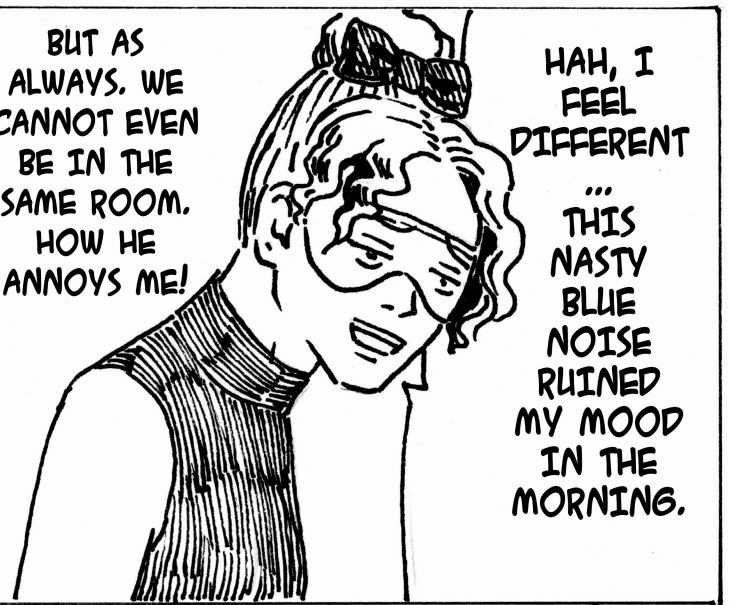

White - the white noise.
White Noise is noise with the same loudness of frequencies across the entire spectrum. Many electrical devices and some natural phenomena such as waterfalls are sources of white noise. It's good for the brain and helps you fall asleep. It also has the ability to mask other noises and sounds.
